

Hybrid 300 Series

Excellent filtration with new embossing technology

Hybrid 300 Series filters

BLU Hybrid 300 filters feature a new 3-layer filter media design. This state-of-the-art filter media stands out in the finished filter:

- 100 % synthetic
- Tested according to **EN779** and **Ashrae 52.2**
- Great handling because of low weight
- Low pressure drop due to laminar air flow
- Exceptional dust holding capacity
- Humidity resistant construction
- Excellent stability and strength
- No microbial growth (without any additives)

Technology

Hybrid 300 filters represent a new generation of filters based on a proprietary and patented pleat technology **with no hotmelt**. The pleat design itself keeps the pleats apart and withstands all air velocities with a laminar air flow.

FILTER MEDIA DESIGN

All filter media types of IREMA-Filter are exclusively manufactured on production machines designed and built in-house. The proprietary manufacturing technology enables IREMA-Filter to flexibly design media out of fibers with different filtration properties. This is reflected by a great number of patented processes and products.

By the combination of different fiber types IREMA can create filter media showing a progressive 3-dimensional layered structure.

Today BLU Hybrid 300 filters utilize the most recent 3-layer design of IREMA, which means each layer features its own characteristics:

1st layer: prefilter layer to reach relevant dust holding capacities

2nd layer: proprietary technology for more filtration efficiency

3rd layer: fine dust filtration to capture smallest particles

All summing up to the excellent BLU-FILTER performance!

Hybrid 300 Series
